## 2011 Catalogue

### Magnesium Ceramic Living Elements

#### Boutique Manufacturer of Fine Hand Crafted Architectural Accents.

There are also no chemicals such as water reducers, plasticizers, or post industrial chemicals (fly ash) in our natural Magnesium Ceramic binder. Although the use of fly ash in building products may seem to be a viable form of recycling, we feel that using a known hazardous material in our luxury architectural product would be just waste disposal masquerading as recycling. The known hazardous chemicals found in fly ash (arsenic, cadmium, barium, lead, mercury, molybdenum, radium, selenium, thorium, uranium, and vanadium) will NOT be a part of our product.

Our Magnesium-Ceramic binder (the part that hold all of the other materials together) is made from natural, biodegradable minerals. These minerals, when water is added, form a gel that subsequently crystallizes to form our Eco-Ceramic. As an organic handmade home element, imperfections in color, texture, porosity, and dimensions are all valued aesthetic qualities.

Enjoy.

# Eko-B101

Suggested Retail \$350.00  
18.5" x 2.5" Magnesium Ceramic Bowl  
Shown in EkoTwist Finish (Concrete Gray & Moonstone Beach)

# Eko-B102
